Stat 135 HW3 #58

Jiying Zou

February 2, 2017

Create a vector containing values 1 to 100. Draw 100 samples of size 12, find the mean of every sample, and plot the results:

```
#Create vector
v <- 1:100
#Sample and plot results
hist(replicate(n = 100, mean(sample(v, 12, replace = FALSE))), main = "Mean of 100 Dr
aws (n=12)", xlab = "Mean")
```

Mean of 100 Draws (n=12)
